

## IMMUNIZATION REQUIREMENTS

Documentation of required immunizations is a very important matter for all health care professionals and something you will be required to do throughout your career. Students at the UNC School of Medicine are required to meet immunization requirements set by **the State** of North Carolina **AND** additional requirements established by **the School of Medicine**. Below are the requirements for the School of Medicine. Campus Health Services will contact you regarding your **State** requirements. **Your acceptance to the UNC School of Medicine is contingent upon your completion of the immunization requirements and submission of the documentation by June 15, 2020.** Students admitted after May 15, 2020 will be allowed an extended deadline, but must contact our Health and Safety Coordinator. Please send email to: [healthandsafety@med.unc.edu](mailto:healthandsafety@med.unc.edu)

### The SCHOOL of MEDICINE requires:

- Tuberculosis Screening: TB blood test/IGRA (QFT-G or T-spot) or a 2-step TB skin test (TST).
  - In low risk individuals, the TB blood test is the preferred method for screening.
  - A 2-step TST (Tuberculin Skin Test) will require 4 visits and must be performed in the United States. If the first TST is negative, a second TST is placed 1-3 weeks later. **The mm (measurement in millimeters) induration is REQUIRED from the tests.**
  - If the first or second TST or TB blood test is positive/reactive, the student is required to meet with a Campus Health medical provider. Note: if a TST was placed within the previous 12 months and it was negative, it is acceptable to only do 1 additional TST to meet the 2-step requirement.
  - If you have a history of a positive/reactive TB screening test (TST or TB blood test), please make an appointment with a Campus Health provider for further evaluation and clearance. **Please bring previous records to that meeting.**
  - For each subsequent year, either an annual TB screening test or a TB questionnaire administered by a nurse will be required. The questionnaire is only done for students who have had a positive TB screening test. Annual screenings can be done at UNC Campus Health.
  - Note: For individuals who have had the BCG vaccine, the TB blood test is preferred over the skin test.
- A positive Varicella titer **or** two dates of immunization done **four weeks apart**. (History of the disease is not acceptable.) The result must state immune or positive.
- Hepatitis B: a primary series of Hepatitis B vaccines and a positive (>10mIU/mL) serological quantitative Hepatitis B surface antibody titer (HBsAb) 1-2 months after the last vaccine of the series. Documentation must show date of immunizations and date of the quantitative result of titer. If series was completed and if the titer checked upon matriculation is negative, the student will get 1 hepatitis B vaccine dose (ie a booster dose) and re-titer at 1-2 months after vaccination. If the second titer is negative, the student will get the additional Hepatitis B vaccine(s) to complete the series per the standard schedule. A final titer should be done 1-2 months after the final vaccine (of the series) and if this is negative, the student should be considered a non-responder and evaluated and counseled appropriately by a UNC Campus Health provider. Note: completion of the requirements may take several months.
- One Tdap (this will meet both the state and UNC School of Medicine requirements) This Tdap is a **one-time** required vaccine for all health science students. A Td (or Tdap) booster is required every 10 years thereafter.

**Please upload your completed immunization documents to Certiphi – myRecordTracker system once you receive an email prompting you to create your account. If you have any questions or concerns, please contact:**
